MONTY
DUAL IMSI SERVICE

We are heading for building a future with no boundaries, a future where the customer has the right to feel at home anywhere around the world. This is what the Monty Dual IMSI service offers. It offers the right for the customer's operator to feel at home. The right to feel safe. The right not to suffer change but to have the power to control change. And it is with great pride that I'm glad to present to you the Monty Dual IMSI Service (Hassan Mansour, Managing Director, Monty Mobile).

Why Monty Dual IMSI Service?

With the constant worldwide increasing number of mobile subscribers, an era is beginning where an operator needs to satisfy the more demanding customer's needs, which with little effort expect to have full global communication access.

Nonetheless, taking into account the complexity of implementing a roaming agreement, full roaming coverage is actually hardly achievable. As it is well known, roaming requires operators to put in place direct roaming agreements with enough operators to gain the required level of global coverage, accordingly it would mean additional costs with the risk of not reaching the highest standard for customer satisfaction.

That's why the Monty Dual IMSI service offers an immediate Roaming Coverage solution, to overcome the limits of bilateral roaming agreements and to provide for customers a full global communication access.

In addition, the Monty Dual IMSI application allows the mobile phone user to store two different subscriptions on the same SIM card. The customer can manage two accounts on one handset. The user experience is completely seamless and all TAP records are identified and processed to ensure the correct traffic allocation, billing and invoice payment procedures.

At the same time, Monty Mobile futuristic vision constantly works to meet the objective of the GSMA's Open Connectivity Initiative, which is to replace the current one-to-one outdated model with a new many-to-many model, hence ensuring the growth and profits for mobile operators in establishing and maintaining a long term global roaming and interworking.

Monty Dual IMSI SERVICE

There are two types of operators. The one who chooses to have limits and the one who chooses to maximize their customer's benefits. Yes, because the secret to success relies into keeping satisfied and increasing the customer base.

That's why Monty Mobile is offering its Monty Dual IMSI Service in conjunction with one of the world's leading mobile network operators, which together have access to more than 500 Roaming Agreements and this is a guarantee to keep placing your customers at the very top of the market leadership.

With Monty Dual IMSI service, an operator without current roaming relationship can provide its customer with SIM cards programmed with two different IMSI numbers. By using the second IMSI, customers from the HPMN can gain immediate unilateral roaming access to all the networks with which Monty Mobile has a direct roaming contractual relationship.

Operators Benefits

- Immediate Outbound Roaming access to all networks holding bilateral Roaming agreements with Monty Mobile.
- More than 600 Roaming Agreements.
- Supports voice, 3G, GPRS, SMS and wireless services.
- Compatible with other roaming solutions: existing or future bilateral roaming, hub and agreements.
- Increase your profits by providing instant inbound/outbound roaming for your subscribers from Monty roaming partners.
- Save on costs and time involved in implementation of bilateral roaming agreements.
- Increase your customer base, for reasons of convenience, end users will stay with the operator who offers Monty Dual IMSI service rather than switch to a second handset with a potentially different operator.

Customer Benefits

- Single handset and single set of data: telephone agenda, contact list and media gallery.
- Subscribers do not need to learn a new PIN code.
- Operators provide seamless indirect international roaming to their Monty Dual IMSI subscribers, while allowing them to be always reachable through their regular telephone number.
- Transparent service for the end customer.
- Great benefits for corporate users and international travelers for whom roaming is greatly valued.

Characteristics

The technical basis of this service consists of installing two IMSIs and a special application designed by the operator in each user's SIM card. The end mobile subscriber will have instant access to all networks that hold bilateral International Roaming Agreements with Monty Mobile, except those excluded at the request of the client operator.

Monty Mobile has an invoicing system that can identify the calls and data sessions of the client operator's subscribers while they are using roaming, so both the wholesale and retail billing can be done transparently for the client operator.

The Monty Dual IMSI Service functionality provides SS7 support, and can optionally provide GPRS support by manipulating both, the SS7 messages and GTP-C/U messages.

Monty Dual IMSI Service:

Enjoy the best market IOTs

Our IMSIs are compatible with all SIM card providers

Fully managed, outsourced solution

Comprehensive NRTRDE and Fraud Protection solutions

Seamless billing and collection via our Financial Clearing & Settlement services

With Monty YES YOU CAN!

Mobile network operators that have just obtained the GSM/3G license.

Operators that migrate technology (CDMA to GSM/3G).
